

Alisson Davi Gonzaga Chagas

Full-Stack Software Engineer | AI Agents & LLM Applications

Salvador, Bahia, Brazil | alissonchagas986@gmail.com | Open to international roles

[GitHub](#) | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

I'm Full-Stack Software Engineer with 2+ years of freelance experience building and deploying web applications and AI-agent systems with Next.js, TypeScript, Python, FastAPI, and PostgreSQL, plus multi-agent LLM workflows with LangChain, LangGraph, CrewAI, and RAG. My projects consist of systems of span fraud detection and automation with AI agents orchestration to media and customer service.

TECHNICAL SKILLS

Languages: Python, TypeScript/JavaScript, SQL

Frontend: React, Next.js (App Router), Vue.js, Tailwind CSS, Zustand

Backend & Data: FastAPI, Flask, REST, WebSocket, OAuth 2.0, SQLAlchemy, Celery, RabbitMQ, PostgreSQL, Redis, Pgvector, ELK Stack

AI / LLM: LangChain, LangGraph, CrewAI, RAG, SDD, Context Engineering, vector databases, multi-agent systems, LLM evaluation

DevOps & Cloud: Docker, GitHub Actions (CI/CD), AWS, Cloudflare, Sentry, Grafana, Prometheus,

Testing & Architecture: Pytest, Vitest, Jest, Hypothesis, TDD, Clean Architecture, Hexagonal Architecture, SOLID, Event-Driven Design

PROFESSIONAL EXPERIENCE

Freelance Full-Stack Software Engineer, Self-employed

(2024 – Present)

- Design, build, and deploy full-stack web apps and AI-agent systems end to end, from database design to CI/CD and cloud.
- Integrate LLM agent pipelines (LangChain, LangGraph, CrewAI) with RAG into products for fraud detection, automation, and customer service; deliver custom web projects for individual clients.

IT Support Intern, Colégio Góes Calmon, Brazil

(2023 – 2024)

PROJECTS

Almaginator - AI Image Generation & Editing Platform

(2026)

Stack: Next.js, FastAPI, CrewAI, LangChain, LangGraph, PostgreSQL, Redis, RabbitMQ, Celery

- Built a full-stack platform that generates and edits images from natural-language prompts, using hexagonal architecture so agent frameworks can be swapped without changing business logic.
- Designed a 4-stage LangGraph state machine (prompt interpretation, safety review, generation/editing, post-processing) with CrewAI agents, including a SafetyReviewerAgent and structured prompt delimiters as defense in depth against prompt injection.
- Ensured quality via eval-driven development (safety, quality, latency rubrics), TDD (pytest + AI in the looping), and property-based tests (Hypothesis).

PaySentinelIQ - AI-Powered Payment Intelligence SaaS

(2026)

Stack: Next.js, FastAPI, PostgreSQL, Redis, LangChain, CrewAI, LangGraph, Pgvector

- Built a fraud-detection platform with a 7-stage multi-agent LLM pipeline scoring Brazilian financial documents (0–100, 5 risk levels).
- Improved document-analysis accuracy with RAG (BAAI/bge-m3 embeddings + Pgvector), reducing interpretation inconsistencies.
- Set up CI/CD (GitHub Actions) and observability (Sentry, Prometheus, Grafana); wrote LGPD/DPIA compliance docs; refactored deployment on Railway, Vercel, and Cloudflare.

Pytomatiza+ - Intelligent Automation Platform

(2026)

Stack: Next.js, FastAPI, CrewAI, LangChain, LangGraph, PostgreSQL, Docker

- Built a multi-tenant platform orchestrating configurable CrewAI/LangChain agent workflows through one UI for non-technical users.
- Containerized with Docker for reproducible Railway deploys; fixed production issues in typing, auth endpoints, and health checks.

ClarkPlayer - Full-Stack Music Player

(2025 – 2026)

Stack: Next.js, FastAPI, Redis, Zustand, ELK Stack

- Built Redis-based session and authentication flows, virtualized rendering (react-window) for large media libraries, drag-and-drop playlists (dnd-kit), and a karaoke-style lyrics mode backed by a shared Zustand store.
- Integrated the MusicBrainz, Spotify, iTunes, and Genius APIs into a unified metadata-enrichment layer.

Facilit_Bot - WhatsApp Customer Service Automation

(2025)

Stack: Python, Flask, CrewAI, Z-API (WhatsApp), React Native (Expo)

- Built an AI-powered WhatsApp bot for an appliance company, handling customer-service conversations via CrewAI agents and Z-API.
- Migrated the frontend from Kivy to React Native (Expo), resolving npm peer-dependency conflicts; refactored agent flows.

EDUCATION & CERTIFICATIONS

B.Sc. in Software Engineering, UNICESUMAR, Brazil

(In progress - 5th of 8 semesters)

Technical Diploma in Information Technology, ICEIA, Brazil

(2023)

Certifications: Udemy: JavaScript & TypeScript, Python 3, Git & GitHub, AWS SAA-C03 preparation course (358 combined hours)

LANGUAGES

Portuguese: Native | English: CEFR B2, TOEFL ITP 553/677 (Aug 2026); CCAA English course completed (11 semesters)
