

Alisson Davi Gonzaga Chagas

Mid-Level Full-Stack Software Engineer

Salvador, Bahia — Brazil · Open to Remote Worldwide

English B2 · github.com/ViChagas07 · [LinkedIn](#) · alissonchagas986@gmail.com

PROFESSIONAL SUMMARY

Self-taught Mid-Level Full-stack Engineer with hands-on experience designing and delivering production-grade SaaS applications from the ground up, skilled in backend, frontend, cloud infrastructure, AI-powered systems, authentication, observability, asynchronous processing, and CI/CD. Comfortable across the entire stack — building async Python/FastAPI backends with Clean Architecture, React/Next.js frontends, PostgreSQL data models, Redis caching layers, and cloud deployments on AWS/Vercel/Railway. Recently focused on integrating LLM-powered agents (LangChain, CrewAI) into real products, including a fraud-detection pipeline and a multi-tenant intelligent automation platform. Currently seeking an international remote role where I can make a meaningful contribution to a fast-moving team and keep growing.

TECHNICAL SKILLS

Languages: Python · TypeScript · JavaScript · SQL

Frontend: React · Next.js 14 (App Router) · Tailwind CSS · Zustand · React Query · next-intl (i18n)

Backend: FastAPI · SQLAlchemy · Alembic · Pydantic · WebSocket · JWT/OAuth/OIDC (OAuth 2.0) · REST

Testing: Pytest · Unittest · Jest · React Testing Query

AI / Agents: LangChain · CrewAI · LLM orchestration · multi-stage document pipelines · BAAI/bge-m3 · OpenAI/Gemini/Ollama API · Opencode

Databases: PostgreSQL · Redis · Alembic migrations · Supabase · PgVector

DevOps / Cloud: Docker/Docker Compose · Cloudflare · AWS (EC2, IAM, SQS, SNS, S3, Lambda, RDS) · Railway · Vercel · GitHub Actions (CI/CD)

Monitoring & Observability: Sentry · Prometheus · Grafana · PostHog

Architecture: Clean Architecture · SOLID · Dependency Injection · Domain-driven patterns · Agentic Systems Architecture · Distributed Task Processing · Event-Driven Patterns

Tools: Git · GitHub · Ruff · Celery · RabbitMQ · Resend · Poetry · OWASP ZAP · UpTimeRobot

FEATURED PROJECTS

PaySentinelIQ — AI-Powered Payment Intelligence SaaS

2026

Live: pay-sentinel-iq.vercel.app | **Code:** github.com/ViChagas07/PaySentinelIQ

Stack: Next.js · FastAPI · PostgreSQL · SQLAlchemy · Redis · LangChain · CrewAI · Vercel · Railway · GitHub Actions

- Designed and built a full-stack fraud-detection SaaS from scratch — real-time transaction monitoring, anomaly detection, and behavioral analytics;
- Implemented a multi-stage AI document pipeline (OCR → extraction → 7-phase LLM analysis → 5-tier risk score 0–100) using CrewAI multi-agent collaboration;
- Architected the FastAPI backend following Clean Architecture principles with SQLAlchemy ORM and Alembic migrations for schema versioning;
- Integrated next-intl (i18n) for multi-language support and fixed complex NextAuth middleware session-persistence bugs in production;
- Set up CI/CD workflows on GitHub Actions and deployed backend on Railway, frontend on Vercel with environment-aware configuration;
- Authored LGPD/DPIA compliance reports, demonstrating awareness of data-privacy regulations in production SaaS;

- Restructured the analysis pipeline making inter-agent communication more reliable and modular;
- Fixed critical NextAuth authentication, session persistence, and App Router middleware issues;
- I improved the accuracy of document analysis by integrating a RAG architecture based on BAAI/bge-m3 (embeddings) and PgVector (vector database), thereby reducing inconsistencies in the system's document interpretation and enhancing the precision of document fraud detection;
- Refactored deployment infrastructure and environment variables across Railway, Vercel, and Cloudflare;
- Implemented observability with Sentry, Prometheus, Grafana, and PostHog for production monitoring.

Pytomatiza+ — Intelligent Automation Platform

2026

Live: pytomatiza.vercel.app | Code: github.com/ViChagas07/Pytomatiza

Stack: Next.js · FastAPI · CrewAI · LangChain · PostgreSQL · Docker · Railway · TypeScript

- Built a multi-domain AI automation platform that orchestrates intelligent workflows across diverse use cases through a unified UI;
- Designed CrewAI/LangChain agent pipelines with configurable tools, enabling non-technical users to compose and run complex automated processes;
- Resolved Railway deployment configuration issues including Pyright type-error blocking, NextAuth wrong-endpoint bugs, and integration health-check failures in production;
- Implemented Docker containerisation for consistent local-to-cloud parity and scalable Railway deployments.
- Fixed Railway deployment issues, including Pyright-related build blocks;
- Resolved frontend-backend integration failures caused by incorrect endpoint configurations;
- Refactored authentication flow and inter-service communication for improved stability;
- Standardized Docker infrastructure for consistency between local development and production;
- Adjusted health checks, environment variables, and agent configurations for reliable deployments.

ClarkPlayer — Superman-Themed Music Player App

2025-2026

Live: clark-player.vercel.app | Code: github.com/ViChagas07/ClarkPlayer

Stack: Next.js · FastAPI · Redis · react-window · dnd-kit · Zustand · Resend · MusicBrainz/Spotify/iTunes API

- Built a full-featured audio player with virtualized large track lists (react-window), drag-and-drop playlist management (dnd-kit), and karaoke lyrics mode;
- Engineered Redis session management and Resend email integration for user authentication flows;
- Resolved complex z-index / sidebar / player-bar layout conflicts using a shared Zustand store and precise CSS strategies;
- Integrated music metadata enrichment via MusicBrainz, iTunes, Spotify, and Genius APIs for local file playback;
- Resolved complex layout conflicts with Sidebar, PlayerBar, and overlapping components using Zustand;
- Refactored shared state architecture to eliminate inconsistencies across application areas;
- Optimized rendering performance through list virtualization for large music libraries;
- Integrated multiple metadata APIs creating a unified enrichment layer for track information;
- Adjusted session management and authentication issues using Redis and Resend;
- Created user traffic with UpTimeRobot, preventing the backend deploy server from going idle and causing errors and delays in catalog retrieval within the app.

FacilitBot — WhatsApp Customer Service Automation

2025

Code: github.com/ViChagas07/Facilit_Bot

Stack: Flask · CrewAI · Z-API (WhatsApp) · React Native (Expo) · Python

- Developed an AI-powered WhatsApp automation bot for a home-appliance business, handling customer service conversations via CrewAI agents and Z-API;
- Refactored the frontend from Kivy to React Native (Expo), including resolving npm peer-dependency conflicts through full scaffold rebuild;
- Completely migrated the frontend from Kivy to React Native (Expo);
- Resolved complex npm ecosystem dependency conflicts during migration;
- Restructured frontend-backend-WhatsApp communication for automated service stability;
- Refactored agent flow to produce more organized and consistent conversation responses.

Code: github.com/ViChagas07/Eude_Ramos

Stack: Next.js · TypeScript · Tailwind CSS

- Interface moderna e totalmente responsiva;
- Desenvolvido com Next.js e TypeScript;
- Renderização otimizada para desempenho e SEO;
- Metadados configurados para melhor indexação nos mecanismos de busca;
- Deploy automatizado na Vercel com integração contínua via GitHub.

ADDITIONAL EXPERIENCE

IT Support Intern · Góes Calmon High-School
months

2023 – 2024 · 6

- Provided day-to-day IT support and helpdesk assistance across the institution, troubleshooting hardware, software, and connectivity issues for staff and students.
- Wrote occasional JavaScript scripts to automate small internal tasks — marking the beginning of a self-directed path into software development that evolved into full-stack engineering.

EDUCATION & SELF-DIRECTED LEARNING

Bachelor's Degree in Software Engineering · UNIJORGE

2024 – Present

- Currently in the 5th semester. Coursework covers software architecture, data structures, algorithms, databases, and systems analysis.

Technical Degree in Information Technology · ICEIA — Instituto
Central de Educação Profissional Isaías Alves

Completed 2023

- Foundational training in computer science, networking, operating systems, and software development practices.

English Language Course — Beginner to Master Level · CCAA
Language School

Completed 2024

- Completed the full CCAA English curriculum from Beginner to Master level, building the professional working proficiency (B2) applied across all international project documentation and communication.

ONLINE CERTIFICATIONS

JavaScript & TypeScript — Beginner to Advanced (with certificate) · Udemy

2024-2025 · 146 hours

- In-depth coverage of modern JS/TS: ES6+, async/await, generics, decorators, strict typing, and real-world patterns directly applied in Next.js and FastAPI projects.

Python 3 — Beginner to Advanced with Real Projects (with certificate) · Udemy

2025 · 141 hours

- End-to-end Python training including OOP, async programming, web scraping, APIs, and project-based exercises — the foundation for all FastAPI backend work in the portfolio.

Git & GitHub — Beginner to Advanced incl. Gist & GitHub Pages (with certificate) · Udemy

2025 · 19 hours

- Advanced version control: branching strategies, rebasing, GitHub Actions basics, Gist, and Pages — applied across all CI/CD pipelines in production projects.

Excel — Complete Beginner to Advanced (with certificate) · Udemy

2025 · 28 hours

- Advanced spreadsheet skills covering pivot tables, complex formulas, data analysis, and automation macros — complementary to data-handling tasks in SaaS projects.

Total certified training hours (Udemy): 334 hours · All certificates available on request.

2022 – Present

Self-Taught Full-stack Software Engineer

- Independently mastered Python, FastAPI, React, Next.js, TypeScript, PostgreSQL, Redis, Docker, AWS, and AI agent frameworks as CrewAI and LangChain through project-driven learning.
- Produced extensive study materials covering Programming languages (specifically, Python, JavaScript/Typescript); Git/GitHub Actions; AWS; API Protocols (i.e. SOAP, REST, and GraphQL); RabbitMQ/Celery; Prometheus/Grafana; security, monitoring, and observability tools (CodeQL, OWASP ZAP); and interview preparation.
- Consistently targets production-grade complexity: multi-tenant SaaS, distributed task queues, LLM pipelines, compliance documentation, and cloud-native deployments.

LANGUAGES

Portuguese: Native
