

Alisson Davi Gonzaga Chagas

Full-Stack Software Engineer | AI Agents and LLM Applications

Brazil • alissonchagas986@gmail.com

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with over 2 years of freelance experience in web applications and AI agent systems with Next.js, TypeScript, Python, FastAPI and PostgreSQL, in addition to multi-agent LLM workflows with LangChain, LangGraph, CrewAI, and RAG. My projects range from fraud detection systems and AI automation to media and customer service.

PROFESSIONAL EXPERIENCE

Self-Employed - Full Stack Software Engineer Freelancer

2024-Present

- Designed, developed and deployed full stack web apps and AI agent systems, from the database to CI/CD and the cloud.
- Integrated LLM agent pipelines (LangChain, LangGraph, CrewAI) with RAG in fraud detection, automation, and customer service products.
- Delivered solutions for 3 clients and developed, in total, 10+ web app and AI system projects for my portfolio.

Colégio Góes Calmon, BA - IT Support Intern

2023-2024

- Provided 1st level support to users, resolving on average 5-10 tickets per day and more than 20/day during enrollment periods.
- Performed preventive and corrective maintenance on computers (hardware and software), reducing class pauses and interruptions.
- Supported internal systems (databases, Excel spreadsheets, and Python/JavaScript automations) for the school's administrative tasks.

EDUCATION

UNICESUMAR - Bachelor's in Software Engineering

Current

In progress - 5th of 8 semesters

ICEIA, BA - Technical Degree in Information Technology

2021-2023

SKILLS

Languages: Python, TypeScript/JavaScript, SQL

Frontend: React, Next.js (App Router), Tailwind CSS, Zustand

Backend and Data: FastAPI, Flask, REST, WebSocket, OAuth 2.0, SQLAlchemy, Celery, RabbitMQ, PostgreSQL, Redis, Pgvector, ELK Stack

AI / LLM: LangChain, LangGraph, CrewAI, RAG, SDD, Context Engineering, GraphiFy, Vector Databases, Multi-agent Systems

DevOps and Cloud: Docker, Docker Compose, GitHub Actions (CI/CD), AWS, Cloudflare, Sentry, Grafana, Prometheus

Testing and Architecture: Pytest, Vitest, Jest, Hypothesis, TDD, Clean Architecture, Hexagonal Architecture, SOLID, Event-Driven Design

PROJECTS

Almaginator - AI Image Generation and Editing Platform

2026

Stack: Next.js, FastAPI, CrewAI, LangChain, LangGraph, PostgreSQL, Redis, RabbitMQ, Celery

- Developed a full-stack platform that generates and edits images from natural language prompts, with a hexagonal architecture that allows swapping agent frameworks without changing business logic.
- Designed a 4-stage state machine in LangGraph (prompt interpretation, safety review, generation/editing, post-processing) with CrewAI agents, including a SafetyReviewerAgent and structured prompt delimiters as defense-in-depth against prompt injection.
- Ensured quality with Eval-Driven Development (safety, quality, latency), TDD (pytest + AI in the loop), and property-based testing.

SentinelPay - AI Payment Intelligence SaaS

2026

Stack: Next.js, FastAPI, PostgreSQL, Redis, LangChain, CrewAI, LangGraph, pgvector

- Developed a fraud detection platform with a 7-stage multi-agent LLM pipeline that scores Brazilian financial documents from 0 to 100 (5 risk levels).
- Increased document analysis accuracy with RAG (BAAI/bge-m3 embeddings + pgvector), reducing inconsistencies.
- Implemented CI/CD (GitHub Actions) and observability (Sentry, Prometheus, Grafana); wrote the LGPD/DPIA documentation.

Pytomatiza+ - Intelligent Automation Platform

2026

Stack: Next.js, FastAPI, CrewAI, LangChain, LangGraph, PostgreSQL, Multi-Tenant APIs

- Built a multi-tenant platform that orchestrates CrewAI/LangChain agent workflows in a single UI for non-technical users.
- Containerized with Docker (reproducible deployments on Railway); fixed typing, authentication, and health check issues.

ClarkPlayer - Full-Stack Music Player Application

2025-2026

Stack: Next.js, FastAPI, Redis, Zustand, ELK Stack

- Developed session and authentication with Redis, virtualized rendering (react-window) for large libraries, drag-and-drop playlists (dnd kit), and a karaoke-style lyrics mode with a shared Zustand store.
- Integrated the MusicBrainz, Spotify, iTunes, and Genius APIs into a unified metadata enrichment layer.

Facilit_Bot - WhatsApp Customer Service Automation

2025

Stack: Python, Flask, CrewAI, Z-API (WhatsApp), React Native (Expo)

- Developed an AI-powered WhatsApp bot for a plotting company, with service handled via CrewAI and LangChain agents.
- Migrated the frontend from Kivy to React Native (Expo), resolving peer-dependency conflicts; refactored the agent flow.

ADDITIONAL INFORMATION

Languages: Portuguese (Native language), English (B2 - TOEFL ITP 553/677 | CCAA - 11 semesters)
